SUMMARY

Applied Research Scientist working in Ericsson LynkAI for interpretable video translation. Graduated as a Computer Science Ph.D. from Johns Hopkins University with a background in interpretable computer vision systems for medical image analysis. Rich experience with computer vision, generative AI, and human-computer interaction. The first author of a Nature Partner Journal paper. Excellent communication skills and ability to work on multi-disciplinary teams.

EDUCATIONS

Johns Hopkins University   **Jan 2018 - Dec 2022 (Degree Completed)**
Doctor of Philosophy, Computer Science   **Degree Awarded in May 2023**
Advisors: Dr. Mathias Unberath, Dr. Gregory Hager   *Baltimore, MD, USA*
First author publications: 5 conference papers, 4 journal papers
First author of one Nature partner journal paper

Columbia University   **Sep 2016 - Dec 2017**
Master of Arts, Statistics   *New York City, NY, USA*
Overall GPA: 4.1 / 4.0

Fudan University   **Sep 2012 - Jun 2016**
Bachelor of Science, Physics   *Shanghai, CHINA*
Core GPA: 3.6 / 4.0

SKILLS

Python, C++, Linux, Slurm, Docker, PyTorch, Tensorflow, Matlab, R, Machine Learning, Deep Learning, Computer Vision, Medical Image Analysis, Human-Computer Interaction, Interpretable Learning, Classification, Object Detection, Instance Segmentation, LLM, Generative AI, Audio Processing, Statistical Analysis

EXPERIENCES

Ericsson, Los Angeles   **Feb 2023 - now**
Applied Research Scientist   *Los Angeles, CA, USA*

Video Translation with Lip Sync and Preserving Tone by Generative AI
- Created the largest dataset of talking head videos from YouTube with 13 languages & 600 hours.
- Established multi-person & lingual audio/video synchronization, outperforming ElevenLabs.
- Refined the lip synchronization network for better articulation.
- Used diffusion to achieve immersive lip synchronization in videos with translated audio.

Meta, Redmond   **Jun 2022 - Oct 2022**
Research Intern   *Redmond, WA, USA*

2D-3D Style Transfer for VR
- Achieved real-time inference and human interaction for personalized customization.
- Preserved 3D visual reality and outperformed other methods in user experience.

- Stylized 3D scene with 2D style images by differential rendering with PyTorch3D & nvdiffrast.
- Learned quickly style transfer, 3D graphics, and rendering from scratch in one week.
- Exceeded director/mentor/peers' expectations in internship review.

PingAn Technology, Bethesda
Applied Research Intern

May 2019 - Dec 2019
Bethesda, MD, USA

Fracture Detection in Pelvic Trauma X-rays
- Deployed in Chang Gung Memorial Hospital in Taiwan and used by over 5000 patients.
- First-author conference paper is accepted by ECCV 2020 with a poster presentation.
- Improved detection AUC from 0.95 to 0.98 and fracture recall from 0.89 to 0.93 (FPR=0.1).
- Mimicked radiologists to detect fractures by comparing bilateral symmetric regions.
- Focused on anatomical asymmetry with contrastive learning.

NVIDIA, Bethesda
Applied Research Intern

May 2018 - Dec 2018
Bethesda, MD, USA

Multi-Abnormality Classification in Chest X-rays
- First-author conference paper is accepted by MIDL 2019 with an oral presentation.
- First-author journal paper is accepted by Medical Image Analysis (*IF = 13.8*).
- Improved classification AUC from 0.87 to 0.89.
- Robust to incompletely labeled data and preserved 85% performance drop.
- Mimicked radiologists to classify abnormality with clinical taxonomy.
- Established numerically stable method for calculation of CE loss of unconditional probabilities.

PingAn Technology, Shanghai
Data Mining Scientist Intern

May 2017 - Aug 2017
Shanghai, CHINA

Lung Nodule Detection in CT Scans
- Achieved top 6 out of 2887 teams in the Skylake competition by Intel and Alibaba.
- Applied 3D UNet with Pytorch & Faster RCNN with Caffe for detection in 1000 CT scans.
- Utilized fusion methods to achieve false positive reduction.

Johns Hopkins University
Research Assistant

Jan 2018 - Feb 2023
Baltimore, MD, USA

Systematic Review for Interpretable ML in Medical Image Analysis
- First-author journal paper is accepted in npj Digital Medicine (*IF = 11.6*).
- Proposed interpretability as a relationship between end users instead of as a property of models.
- Introduced guidelines to recommend first understanding end users before model design.
- Conducted a systematic review in PubMed, EMBASE, and Compendex databases.
- Identified 2508 records and included 68 articles.

Interpretable Cancer Subtyping with Cytopathology Images
- First-author conference paper is accepted in ICML workshop.
- Improved cancer subtyping AUC from 0.75 to 0.87 and provided interpretation.
- Analyzed cell composition by cell segmentation deep features and rule-based learning.
- Proved to be interpretable in a web-based user study with pathologists.

Interpretable High-Quality ROI Extraction with Cytopathology Images
- First-author conference paper is accepted in MICCAI workshop.
- Created automatic and interactive high-quality ROI extraction with deep clustering.
- Improved recall from 11% to 51% and speeded up by 10 times.

Pelvic Fracture Severity Grading with CT Scans

· First-author journal paper under third-round review in IEEE TMI (*IF = 10.6*).
· Applied Bayesian model to predict severity grading with AO/OTA clinical grading criterion.
· Proposed Bayesian refinement to retrieve false-negative fractures.
· Established augmented inference to calculate robust fracture confidence scores.

Automatic Splenic Injury Grading System with CT Scans

· First-author journal paper is accepted in Emergency Radiology (*IF = 1.59*).
· Proposed neuralsymbolic learning by following AAST clinical guidelines.
· Created rule-based symbolic reasoning for severity grading with deep network findings.

AWARDS

Mentor award in the Howard County Public School.	*April 2022*
National College Students Mathematics Competition, National Silver Medal.	*Oct 2013*
National College Students Mathematics Model Contest, the third prize of Shanghai.	*Oct 2014*
Second-class scholarship of Fudan University.	*May 2015*
Mensa Member in China.	*May 2016*
